CHAD READEY

(708) 205-6633 | cr3500@columbia.edu | linkedin.com/in/chad-readey/ | github.com/chadreadey

EDUCATION

Columbia University New York, NY
Master of Science Aug 2025 - Dec 2026
Master of Science in Management Science & Engineering | Innovation Concentration

Northwestern University Evanston, IL
Bachelor of Arts Sep 2021 - Jun 2025
Bachelor of Arts in Data Science | Minor in Business Institutions | BIG10 All-Academic Team '23, '24, '25 | Baseball Student-Athlete

RELEVANT EXPERIENCE

The Vistria Group Chicago, IL
Consultant, **Data & AI** Aug 2026 - Present
Data/AI Intern Jun 2026 - Aug 2026

- Designed and shipped a six-agent investment-research system that decomposes themes across independent analytical lenses, evaluates competing theses against identified variables, and synthesizes cross-agent findings to surface causal relationships
- Developed and deployed a natural-language interface over firm's proprietary CRM; engineered mediation layer to validate model-generated intent, create parameterized queries, and enforce permission gating before operating against sensitive financial data
- Created production AI workflows with structured error-handling, observability, and 5-class failure taxonomy to improve debugging, reliability analysis, and iterative model improvement

Crystal Venture Partners New York, NY
Embedded Engineer Dec 2025 - May 2026

- Architected xT, an agentic investment-intelligence system to autonomously triage inbound deal flow by interpreting email intent, ingesting and analyzing pitch decks, researching companies and founders, and synthesizing findings into partner briefs
- Iterated xT through a human-in-the-loop evaluation process with investment partners, incorporating expert feedback on research coverage, risk identification, synthesis quality, and decision usefulness before deployment into diligence workflows
- Constructed autonomous CRM data-quality agents to sanitize records, classify contacts, and automatically update 2000+ entries, converting recurring manual data-maintenance workflows into automated pipelines

Handshake AI Remote
Model Validation Expert - ML Specialist Sep 2025 - Nov 2025

- Implemented multimodal model evaluation tasks requiring image-grounded knowledge retrieval and reasoning, testing LLM performance across 15 combined text-image contexts
- Established modular agent workflows combining LLM reasoning, code generation, and feedback loops to streamline ML experimentation and performance improvement across 5 AI agents

Public Equity Group Remote
Graduate Fellow Apr 2025 - Sep 2025

- Delivered user research insights, shaped product roadmaps, and increased user retention by 15% for an Edtech client
- Drove a $990K cost reduction proposal and helped leadership assess financial sustainability scenarios for an at-risk firm

ENGINEERING PROJECTS

Energy Policy GPT

- Built a five-agent policy-intelligence system spanning research management, database retrieval, analytics, literature review, and automated evaluation to orchestrate complex energy-policy research workflows
- Engineered a data-ingestion pipeline across five energy-policy databases to scrape, process, and classify 2000+ policy records

AI Financial Analyst

- Architected a financial-research pipeline running six specialist LLM analysts in parallel across SEC/XBRL filings, market data, macroeconomic indicators, sentiment, and retrieved research before structured synthesis
- Designed an evaluation-first reliability framework using cassette replay, and computable ground truth; validated 11 regression scenarios and 148 deterministic assertions spanning schema validity, arithmetic faithfulness, grounding, and missing data behavior
- Built a 1,058-test quality system spanning orchestration, quantitative signals, point-in-time data controls, portfolio construction, API behavior, and failure recovery; developed statistical validation using purged cross-validation and walk-forward testing

SKILLS

AI Systems: LangGraph, LangChain, OpenAI/Perplexity/Anthropic APIs, RAG, tool calling, MCP, Pinecone, LLM evaluation
Engineering & Infrastructure: FastAPI, asyncio, Pydantic, pytest, Github Actions, OpenTelemetry, PostgreSQL, GCP, Azure, n8n
Languages & ML: Python, SQL, Pandas, TypeScript, R, Gurobi, scikit-learn, PyTorch, statsmodels, Numpy, XGBoost, CatBoost
